Re: Notice of Periodic Test for Backflow Prevention Assembly - First Notice

The backflow prevention assemblies described below are due for their periodic test as required by the State of South Carolina Safe Drinking Act. Section 44-55 and South Carolina Department of Environmental Services Regulation 61-58.7. Please have this test performed by a backflow prevention assembly tester that is certified by the State of South Carolina within thirty (30) days of the date on this letter. Failure to furnish test results within 30 days will result in a service charge of \$50.00 being applied to your account. If results are not received within 45 day, fines of \$5.00 per day will be added until results are received.

If the test discloses that the assembly is not operating satisfactorily, please have the necessary repairs made and the assembly retested by the certified tester. On completion of a test showing that the assembly is operating satisfactorily, please have the tester certify the test and forward the results to this office. Please be sure that the tester signs the report and provides his/her certification number.

A list of certified backflow prevention testers is included in this letter. This list is a state compiled list and it is the responsibility of the owner of the assemblies to insure that the person checking the device is currently licensed. The proper inspection form is enclosed. Should additional information be needed, please go to <https://des.sc.gov/programs/bureau-water/drinking-water/cross-connection-control-backflow-prevention> or call or write this office.

Regards,

Russell Smith
